INTRODUCTION

Each year, the oil and shipping industries produce hundreds of thousands of tonnes of oily sludge and slop that have to be disposed of.

Oily waste, particularly oily sludge, is made up of a mixture of oil, water, sand, stones, and other foreign matter in varying proportion

How an industry handles its waste is the real measure of its integrity and future viability. Across the globe, international environmental bodies demand increasingly higher levels of compliance. Companies must stretch their financial and staff resources to meet these obligations.

PT. Gamter Jaya provided one stop tank cleaning services, from de-slopping, tank washing, de-mucking, sludge packaging and disposal. We also provide gas freeing for many purpose.
